## This is the beauty of **MADE IN JAPAN**

Since 1972, producing premium Made in Japan golf clubs that combine traditional Japanese beauty with high performance functionality. Elegant designs with intricate patterns and gold accents. Combining head and shaft with all of our latest technology, ALL FOR MORE DISTANCE.

# DESIGNED FOR ULTIMATE DISTANCE

## SWING SPEED UP DESIGN

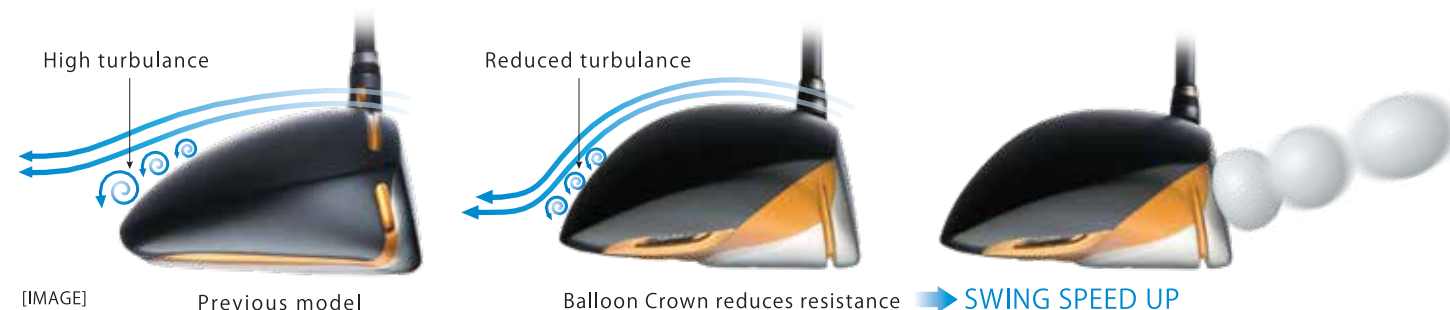

## SPRING TECHNOLOGY

### BALLOON CROWN

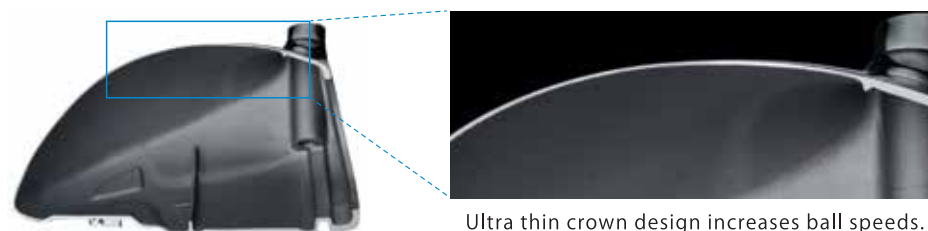

#### New crown featuring a Laminar Airfoil design

Driver Only

Innovative new aerodynamic balloon shaped head creates increased swing speed thanks to reduction in air resistance and drag.

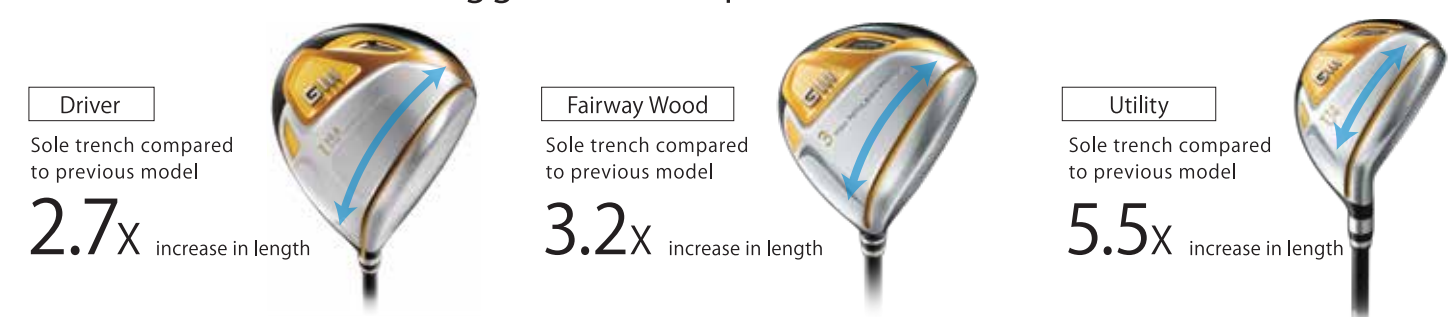

By using a balloon like shape for the crown, the aerodynamics of the head are improved reducing air resistance and minimizing turbulence which produces increased swing speeds and more ball speeds. The result is more power and more distance.

### LONG SOLE POWER TRENCH

#### Power Trench for a bigger sweet spot, more distance and ease of use

### INCREASED BALL SPEEDS AND FORGIVENESS

#### Designed for increased spring effect which equals more ball speeds

Our unique GIII face shape continues to evolve to create even bigger sweet spots and faster ball speeds. Combined with the improved Power Trench, GIII pushes the limits of easy distance and performance.

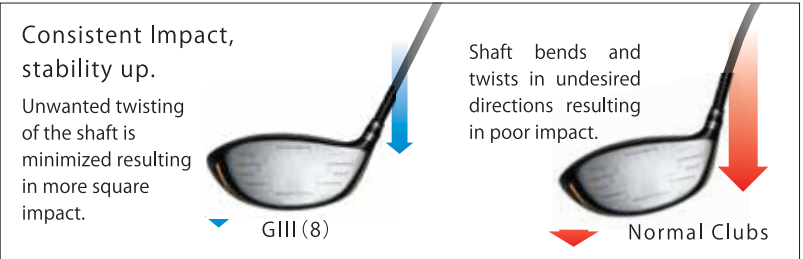

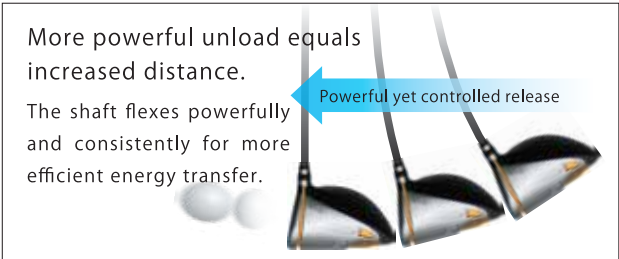

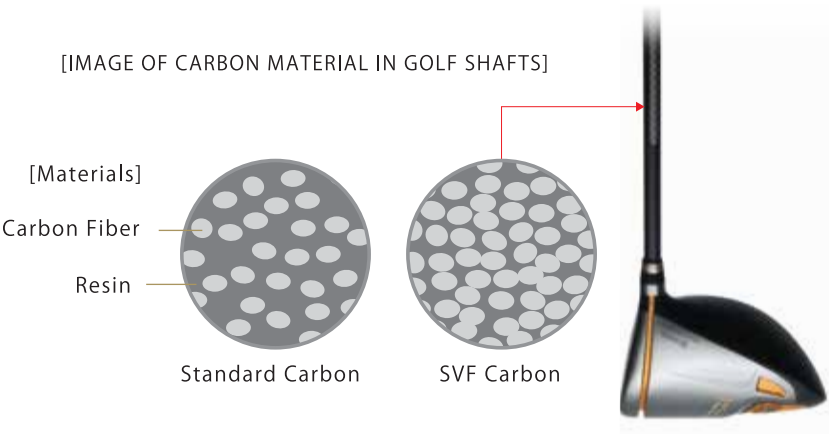

# THE ULTIMATE DISTANCE SHAFT CREATED WITH DAIWA CARBON TECHNOLOGY SWING SPEED UP × STABILITY UP

DAIWA's experience in the development of carbon fiber is unrivalled thanks to over 60 years of experience as a world leader in fishing gear technology, in particular fishing rods. Key proprietary technologies are carried over to create revolutionary GIII shafts, unmatched in quality, feel, and performance.

## DISTANCE AND STABILITY UP - SVF CARBON

Increase swing speed, maximize impact energy, improve ball speeds, stability and control

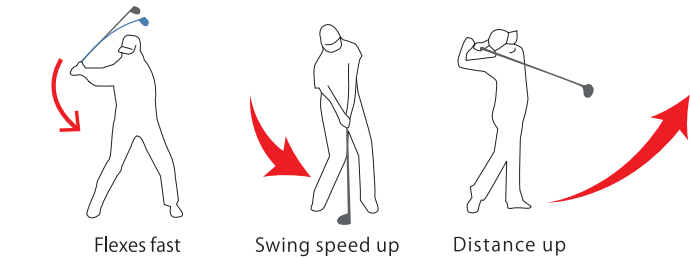

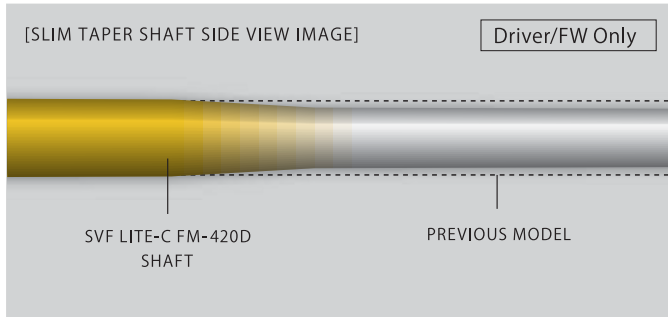

Golf shafts are made of carbon fiber sheets held together by resin. Most golf shafts have a high ratio of resin to carbon fibers which makes the shaft less consistent and less stable. GIII shafts have tighter packed carbon fiber material meaning far less resin. GIII shafts are able to create better energy transfer thanks to a much more consistent load and release, while at the same time increasing head speed, thanks to its lighter weight. Swing naturally produces a stable and consistent swing for more distance, more accuracy.

## HIGH SPEED, HIGH REBOUND SHAFT

Reducing air resistance and increasing speed equals ball speeds up

Our uniquely developed slim taper shape shaft loads and unloads quickly. The slim design reduces air resistance increasing swing speed and increasing distance performance.

## LIGHT WEIGHT DESIGN

Light weight shaft makes the club lighter and easier to swing which increases swing speed.

NEO TITANIUM FACE + FULL CORE GROOVES

An evolved face design creates a wider sweet spot, more ball speeds, and more distance and ease of use.

With our Full Core Groove’s wider sweet spot, even miss hits fly far!

COR 0.825

Full Core Grooves

Neo Titanium Face

MULTI ANGLE TWIN CUT SOLE

A unique sole design that reduces friction at impact making it easier to swing and more stable.

Twin Cut Sole with toe relief

Heel side sole design helps keep head on line to target

Twin Cut Sole’s improved turf interaction = CONTROL + DISTANCE UP

GRAVITY CONTROL

High MOI head design with excellent accuracy even on miss hits.

High Moment of Inertia head with a low and deep center of gravity and longer CG distance help the head square faster to the ball for a more powerful impact.

Sintered Tungsten Weight

LIGHTER WEIGHT

A lighter club is easier to swing and creates more swing speed.

GIII SIGNATURE

GIII SIGNATURE CLUB FUNCTION

NEW DOUBLE REPULSION HEAD

EVOLVED DOUBLE POWER TRENCH

The new SIGNATURE features deeper, longer and wider Power Trenches which increase spring effect through more powerful and consistent flex and recovery of the head at impact.

SOUND SPINE

Inside the head on the sole and crown, sound spines help create a more pleasing impact sound.

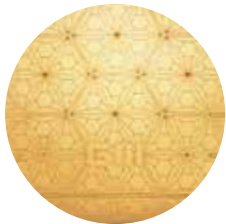

MORE SPRING EFFECT THANKS TO OUR GIII NEO TITANIUM FACE

At 1.6 times more flexible than standard titanium, we are able to achieve an amazing COR rating of 0.875.

※based on our measuring methods

LASER MILLING CREATES STABLE SPIN AND BALL FLIGHT

Not just a beautiful face, the laser milling helps stabilize spin even in wet or bad conditions.

Driver

A luxury head with all our technology for the sake of more distance. The pinnacle of driver performance and quality design and manufacturing

GIII SIGNATURE CLUB FUNCTION

A NEW DOUBLE REPULSION HEAD

MAKE BETTER IMPACT  
GIII NEO TWIN CUT SOLE

Our wide sole with specially designed indent reduces digging and minimizes friction with the ground at impact creating better impact. Better impact equals more distance and better accuracy.

NEO TITANIUM FACE

Our proprietary titanium face produces 0.825 COR, the highest for an iron in GIII history.  
※based on our measuring methods

POWER TRENCH (bottom face)

Special trenches (grooves) on the back face help increase flex and repulsion for higher ball speeds and more distance. The larger sweet spot maximizes spring effect towards the bottom of the face,

0.825  
COR

SINTERED INNER TUNGSTEN CREATES  
AN EASY HIGH LAUNCH TRAJECTORY

Sintered inner tungsten built into the sole moves the center of gravity low and deep for an easy high launch with optimal spin. Easy distance for even slower swingers.

SQUARE GROOVES + LASER  
MILLING = IMPROVED SPIN

Spin performance is greatly improved thanks to non conforming square grooves. Increased spin helps you attack the green with confidence.

# Putter

A revival of the GIII swan neck design creates a face balanced putter, easier to align and putt straight in the hole.

A face balanced putter produces a more stable and consistent stroke. The GIII putter combines our unique swan neck with a familiar blade shape head which allows the player to aim with confidence and repeat the same stroke over and over.
